CHAPTER 3
GREEN BUILDING

SECTION 301 GENERAL

301.1 SCOPE. Buildings shall be designed to include the green building measures specified as mandatory in the application checklists contained in this code. Voluntary green building measures are also included in the application checklists and may be included in the design and construction of structures covered by this code, but are not required unless adopted by a city, county, or city and county as specified in Section 101.7.

301.3 NONRESIDENTIAL ADDITIONS AND ALTERATIONS. This applies to all lateral angles around the luminaire.

LOW-EMITTING AND FUEL EFFICIENT VEHICLES.
Eligible vehicles are limited to the following:

A. Zero emission vehicle (ZEV), including neighborhood electric vehicles (NEV), partial zero emission vehicle (PZEV), advanced technology PZEV (AT ZEV) or CNG fueled (original equipment manufacturer only) regulated under Health and Safety Code section 43800 and CCR, Title 13, Sections 1961 and 1962.
B. High-efficiency vehicles, regulated by U.S. EPA, bearing High-Occupancy Vehicle (HOV) car pool lane stickers issued by the Department of Motor Vehicles.

SECTION 5.106 SITE DEVELOPMENT

5.106.1 STORM WATER POLLUTION PREVENTION FOR PROJECTS THAT DISTURB LESS THAN ONE ACRE OF LAND. Newly constructed projects and additions which disturb less than one acre of land, and are not part of a larger common plan of development or sale, shall prevent the pollution of storm water runoff from the construction activities through one or more of the following measures:

5.106.1.1 Local ordinance. Comply with a lawfully enacted storm water management and/or erosion control ordinance.

5.106.1.2 Best Management Practices (BMPs). Prevent the loss of soil through wind or water erosion by implementing an effective combination of erosion and sediment control and good housekeeping BMPs.

1. Soil loss BMPs that should be considered for implementation as appropriate for each project include, but are not limited to, the following:
   a. Scheduling construction activity during dry weather, when possible.
   b. Preservation of natural features, vegetation, soil, and buffers around surface waters.
   c. Drainage swales or lined ditches to control stormwater flow.
   d. Mulching or hydroseeding to stabilize disturbed soils.
   e. Erosion control to protect slopes.
   f. Protection of storm drain inlets (gravel bags or catch basin inserts).
   g. Perimeter sediment control (perimeter silt fence, fiber rolls).
   h. Sediment trap or sediment basin to retain sediment on site.
   i. Stabilized construction exits.
   j. Wind erosion control.
   k. Other soil loss BMPs acceptable to the enforcing agency.
2. Good housekeeping BMPs to manage construction equipment, materials, non-stormwater discharges and wastes that should be considered for implementation as appropriate for each project include, but are not limited to, the following:
   a. Dewatering activities.
   b. Material handling and waste management.
   c. Building materials stockpile management.
   d. Management of washout areas (concrete, paints, stucco, etc.).

5.106.2 STORMWATER POLLUTION PREVENTION FOR PROJECTS THAT DISTURB ONE OR MORE ACRES OF LAND. Comply with all lawfully enacted stormwater discharge regulations for projects that (1) disturb one acre or more of land, or (2) disturb less than one acre of land but are part of a larger common plan of development sale.

Note: Projects that (1) disturb one acre or more of land, or (2) disturb less than one acre of land but are part of the larger common plan of development or sale must comply with the post-construction requirements detailed in the applicable National Pollutant Discharge Elimination System (NPDES) General permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities issued by the State Water Resources Control Board or the Lahontan Regional Water Quality Control Board (for projects in the Lake Tahoe Hydrologic Unit).

The NPDES permits require postconstruction runoff (post-project hydrology) to match the preconstruction runoff (pre-project hydrology) with the installation of postconstruction stormwater management measures. The NPDES permits emphasize runoff reduction through on-site stormwater use, interception, evapotranspiration, and infiltration through nonstructural controls, such as Low Impact Development (LID) practices, and conversation design measures. Stormwater volume that cannot be addressed using nonstructural practices is required to be captured in structural practices and be approved by the enforcing agency.

Refer to the current applicable permits on the State Water Resources Control Board website at: www.waterboards.ca.gov/constructionstormwater. Consideration to the stormwater runoff management measures should be given during the initial design process for appropriate integration into site development.

EROSION CONTROL NOTES

1. ALL BUILDING PADS TO BE DIKED AND THE DIKES MAINTAINED TO PREVENT WATER FROM FLOWING FROM THE PAD UNTIL THE STREETS AND DRIVEWAYS ARE PAVED AND WATER CAN FLOW FROM THE PADS WITHOUT CAUSING EROSION, OR CONSTRUCT DRAINAGE FACILITIES TO THE SATISFACTION OF THE COUNTY DEPARTMENT OF PUBLIC WORKS THAT WILL ALLOW WATER TO DRAIN FROM THE PAD WITHOUT CAUSING EROSION.
2. TOPS OF ALL SLOPES TO BE DIKED OR TRENCHED TO PREVENT WATER FROM FLOWING OVER THE CREST OF SLOPES.
3. MANUFACTURED SLOPES AND PADS SHALL BE ROUNDED VERTICALLY AND HORIZONTALLY AS APPROPRIATE TO BLEND WITH THE SURROUNDING TOPOGRAPHY.
4. AS SOON AS CUTS OR EMBANKMENTS ARE COMPLETED, BUT NOT LATER THAN OCTOBER 1 ALL CUT AND FILL SLOPES SHALL BE STABILIZED WITH A HYDROMULCH MIXTURE OR AN EQUAL TREATMENT APPROVED BY THE COUNTY DEPARTMENT OF PUBLIC WORKS BETWEEN OCTOBER 1 AND APRIL 15. APPROVED SLOPE PROTECTION MEASURES SHALL PROCEED IMMEDIATELY BEHIND THE EXPOSURE OF CUT SLOPES AND/OR THE CREATION OF EMBANKMENT SLOPES.
5. CATCH BASINS, DESILTING BASINS AND STORM DRAIN SYSTEM SHALL BE INSTALLED TO THE SATISFACTION OF THE COUNTY DEPARTMENT OF PUBLIC WORKS.
6. SAND BAG CHECK DAMS TO BE PLACED IN A MANNER APPROVED BY THE COUNTY DEPARTMENT OF PUBLIC WORKS IN UNPAVED STREETS WITH GRADIENTS IN EXCESS OF 2% AND ON OR IN OTHER GRADED OR EXCAVATED AREAS AS REQUIRED BY THE COUNTY DEPARTMENT OF PUBLIC WORKS.
7. THE DEVELOPER TO MAINTAIN THE PLANTING AND EROSION CONTROL MEASURES DESCRIBED ABOVE UNTIL RELIEVED OF THE SAME BY THE COUNTY DEPARTMENT OF PUBLIC WORKS. THE DEVELOPER TO REMOVE ALL SOIL INTERCEPTED BY THE SAND BAGS, CATCH BASINS AND DESILTING BASINS AND KEEP THESE FACILITIES CLEAN AND FREE OF SILT AND SAND AS DIRECTED BY THE COUNTY DEPARTMENT OF PUBLIC WORKS. THE DEVELOPER SHALL REPAIR ANY ERODED SLOPES AS DIRECTED BY THE COUNTY DEPARTMENT OF PUBLIC WORKS.

SILTATION AND SEDIMENT CONTROL MEASURES NOTES:

1. THE SEDIMENT BASINS SHALL BE PROVIDED AT THE LOWER END OF EVERY DRAINAGE AREA PRODUCING SEDIMENT RUNOFF. THE BASINS SHALL BE MAINTAINED AND CLEANED TO DESIGN CONTOURS AFTER EVERY RUNOFF PRODUCING STORM. THE BASINS SHOULD BE SEMI-PERMANENT STRUCTURES THAT WOULD REMAIN UNTIL SOIL STABILIZING VEGETATION HAS BECOME WELL ESTABLISHED ON ALL ERODIBLE SLOPES.
2. SEDIMENTATION BASINS MAY NOT BE REMOVED OR MADE INOPERATIVE WITHOUT PRIOR APPROVAL OF THE COUNTY ENGINEER.
3. SEWER OR STORM DRAIN TRENCHES THAT ARE CUT THROUGH BASIN DIKES OR BASIN INLET DIKES SHALL BE PLUGGED WITH SANDBAGS FROM TOP OF PIPE TO TOP OF DIKE.
4. ALL UTILITY TRENCHES SHALL BE BLOCKED AT THE PRESCRIBED INTERVALS WITH A DOUBLE ROW OF SANDBAGS WITH A TOP ELEVATION TWO SANDBAGS BELOW THE GRADED SURFACE OF THE STREET. SANDBAGS ARE TO BE PLACED WITH LAPPED COURSES. THE INTERVALS PRESCRIBED BETWEEN SANDBAG BLOCKING SHALL DEPEND ON THE SLOPE OF THE GROUND SURFACE BUT NOT TO EXCEED THE FOLLOWING:

GRADE OF THE STREET	INTERVAL
LESS THAN 2%	AS REQUIRED
2% TO 4%	100 FEET
4% TO 10%	50 FEET
OVER 10%	25 FEET

5. AFTER SEWER UTILITY TRENCHES ARE BACKFILLED AND COMPACTED, THE SURFACES OVER SUCH TRENCHES SHALL BE MOUNDED SLIGHTLY TO PREVENT CHANNELING OF WATER IN THE TRENCH AREA. CARE SHOULD BE EXERCISED TO PROVIDE FOR CROSS FLOW AT FREQUENT INTERVALS WHERE TRENCHES ARE NOT ON THE CENTERLINE OF A CROWNED STREET.
6. ALL BUILDING PADS SHOULD BE SLOPED TOWARDS THE DRIVEWAYS AND VELOCITY CHECK DAMS PROVIDED AT THE BASE OF ALL DRIVEWAYS DRAINING INTO THE STREET.
7. PROVIDE VELOCITY CHECK DAMS IN ALL UNPAVED GRADED CHANNELS AT THE INTERVALS INDICATED BELOW:

GRADE OF CHANNEL	INTERVALS BETWEEN CHECK DAMS
LESS THAN 3%	100 FEET
3% TO 6%	50 FEET
OVER 6%	25 FEET

8. PROVIDE A SANDBAG SILT BASIN OR TRAP BY EVERY STORM DRAIN INLET TO PREVENT SEDIMENT FROM ENTERING DRAIN SYSTEM.
9. SANDBAGS AND FILL MATERIAL SHALL BE STOCKPILED AT INTERVALS, READY FOR USE WHEN REQUIRED.
10. ALL EROSION CONTROL DEVICES WITHIN THE DEVELOPMENT SHOULD BE MAINTAINED DURING AND AFTER EVERY RUNOFF PRODUCING STORM, IF POSSIBLE, MAINTENANCE CREWS WOULD BE REQUIRED TO HAVE ACCESS TO ALL AREAS.
11. PROVIDE ROCK RIPRAP ON CURVES AND STEEP DROPS IN ALL EROSION PRONE DRAINAGE CHANNELS DOWNSTREAM FROM THE DEVELOPMENT. THIS PROTECTION WOULD REDUCE EROSION CAUSED BY THE INCREASED FLOWS THAT MAY BE ANTICIPATED FROM DENUDED SLOPES, OR FROM IMPERVIOUS SURFACES.
12. ANY PROPOSED ALTERNATE CONTROL MEASURES MUST BE APPROVED IN ADVANCE BY ALL RESPONSIBLE AGENCIES: I.E., COUNTY ENGINEER, DEPARTMENT OF SANITATION AND FLOOD CONTROL, OFFICE OF ENVIRONMENTAL MANAGEMENT, ETC.

NOTICE

EFFECTIVE SOIL COVER MUST BE EMPLOYED FOR INACTIVE AREAS WHICH INCLUDES ALL FINISHED SLOPES, OPEN SPACE, UTILITY BACKFILL, AND COMPLETED PADS. INACTIVE AREAS OF CONSTRUCTION ARE AREAS THAT HAVE BEEN DISTURBED AND ARE NOT SCHEDULED TO BE RE-DISTURBED FOR AT LEAST 14 DAYS.

*** CONTRACTOR IS TO UPDATE S.W.P.P.P. WALL MAP (THIS EXHIBIT) TO REFLECT ACTUAL B.M.P. LOCATIONS.**

STORMWATER PROTECTION NOTES

1. DURING THE RAINY SEASON THE AMOUNT OF EXPOSED SOIL ALLOWED AT ONE TIME SHALL NOT EXCEED THAT WHICH CAN BE ADEQUATELY PROTECTED BY THE PROPERTY OWNER IN THE EVENT OF A RAINSTORM. 125% OF ALL SUPPLIES NEEDED FOR BMP MEASURES SHALL BE RETAINED ON THE JOB SITE IN A MANNER THAT ALLOWS FULL DEPLOYMENT AND COMPLETE INSTALLATION IN 48 HOURS OR LESS OF A FORECAST RAIN.
2. NO AREA BEING DISTURBED SHALL EXCEED 50 ACRES AT ANY GIVEN TIME WITHOUT DEMONSTRATING TO THE SAN DIEGO COUNTY DPW DIRECTOR'S SATISFACTION THAT ADEQUATE EROSION AND SEDIMENT CONTROL CAN BE MAINTAINED. ANY DISTURBED AREA THAT IS NOT ACTIVELY GRADED FOR 15 DAYS MUST BE FULLY PROTECTED FROM EROSION. UNTIL ADEQUATE LON-TERM PROTECTIONS ARE INSTALLED, THE DISTURBED AREA SHALL BE INCLUDED WHEN CALCULATING THE ACTIVE DISTURBANCE AREA. ALL EROSION CONTROL MEASURES SHALL REMAIN INSTALLED AND MAINTAINED DURING ANY INACTIVE PERIOD.
3. THE PROPERTY OWNER IS OBLIGATED TO INSURE COMPLIANCE WITH ALL APPLICABLE STORMWATER REGULATIONS AT ALL TIMES. THE BMP'S (BEST MANAGEMENT PRACTICES) THAT HAVE BEEN INCORPORATED INTO THIS PLAN SHALL BE IMPLEMENTED AND MAINTAINED TO EFFECTIVELY PREVENT THE POTENTIALLY NEGATIVE IMPACTS OF THIS PROJECT'S CONSTRUCTION ACTIVITIES ON STORMWATER QUALITY. THE MAINTENANCE OF THE BMP'S IS THE PERMITTEE'S RESPONSIBILITY, AND FAILURE TO PROPERLY INSTALL OR MAINTAIN THE BMP'S MAY RESULT IN ENFORCEMENT ACTION BY THE COUNTY OF SAN DIEGO OR OTHERS. IF INSTALLED BMP'S FAIL, THEY MUST BE REPAIRED OR REPLACED WITH AN ACCEPTABLE ALTERNATE WITHIN 24 HOURS, OR AS SOON AS SAFE TO DO SO.
4. ON PROJECTS OF GREATER THAN 1 ACRE ADD THE FOLLOWING NOTE: A NOTICE OF INTENT (NOI) HAS BEEN, OR WILL BE FILED WITH THE STATE WATER RESOURCES CONTROL BOARD (SWRCB) AND THAT A STORMWATER POLLUTION PREVENTION PLAN (SWPPP) HAS BEEN OR WILL BE PREPARED IN ACCORDANCE WITH THE REQUIREMENTS OF CALIFORNIA GENERAL PERMIT FOR STORMWATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY (PERMIT NO. CAS000002) FOR ALL OPERATIONS ASSOCIATED WITH THESE PLANS. THE NOI NUMBER ASSIGNED BY SWRCB FOR THIS PROJECT IS [INSERT] [ALTERNATIVE: NOT YET ASSIGNED, BUT WILL BE PROVIDED BEFORE A PERMIT IS ISSUED]. THE PERMITTEE SHALL KEEP A COPY OF THE SWPPP ON SITE AND AVAILABLE FOR REVIEW BY COUNTY.

STORM WATER RUN OFF MANAGEMENT NOTES

1. THE OWNER AND/OR OWNER'S CONTRACTOR SHALL BE RESPONSIBLE TO ESTABLISH A PLAN TO IMPLEMENT BEST MANAGEMENT PRACTICE TO ELIMINATE POLLUTANT DISCHARGE TO THE PUBLIC STORM DRAIN SYSTEM. SUCH PLAN SHALL BE SUBMITTED TO AND REVIEWED BY THE CITY ENGINEER PRIOR TO ANY SOIL DISTURBANCE GRADING, CLEARING OF VEGETATIVE MATTER, AND/OR CONSTRUCTION ON THE SITE.
2. THE PLAN SHALL PROVIDE THAT NO SAND, SILT OR DEBRIS SHALL BE ALLOWED TO ENTER THE STORM DRAIN SYSTEM INCLUDING PUBLIC STREETS.
3. THE OWNER AND/OR THE OWNER'S CONTRACTOR SHALL IMPLEMENT THE PLAN AND TAKE REMEDIAL AND PREVENTATIVE ACTION IMMEDIATELY WHEN POLLUTANT DISCHARGE OCCURS AND/OR THE CITY ENGINEER OR THE BUILDING DIVISION DIRECTS.
4. THE ABOVE SHALL APPLY STARTING THE 1ST DAY OF GRADING AND/OR CONSTRUCTION AND SHALL REMAIN IN EFFECT UNTIL ALL GRADING AND/OR CONSTRUCTION WORK HAS BEEN COMPLETED.

EROSION AND SEDIMENT CONTROL NOTES

1. IN CASE OF EMERGENCY WORK IS REQUIRED, CONTACT _____
2. EROSION CONTROL MEASURES SHOWN ON PLANS SHALL NOT BE MOVED OR MODIFIED WITHOUT THE APPROVAL OF THE PUBLIC WORKS INSPECTOR.
3. THE CONTRACTOR SHALL MAINTAIN ALL EROSION CONTROL DEVICES IN WORKING ORDER TO THE SATISFACTION OF THE CITY ENGINEER THROUGHOUT THE CONSTRUCTION PHASE OF THE PROJECT AND UNTIL PERMANENT GROUND COVER AND LANDSCAPING IS ESTABLISHED.
4. THE CONTRACTOR SHALL INSTALL ADDITIONAL EROSION CONTROL MEASURES AS MAY BE REQUIRED BY THE CITY ENGINEER DUE TO COMPLETED GRADING OPERATIONS OR UNFORESEEN CIRCUMSTANCES WHICH MAY ARISE.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR AND SHALL TAKE NECESSARY PRECAUTIONS TO PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATERS CREATE A HAZARDOUS CONDITION.
6. GRADED AREAS AROUND THE PROJECT PERIMETER MUST DRAIN AWAY FROM THE FACE OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY.
7. ALL GRAVEL BAGS SHALL BE BURLAP TYPE WITH 3/4 INCH MINIMUM AGGREGATE.

WET SEASON (OCTOBER 1 THROUGH APRIL 30)

IN ADDITION TO THE DRY SEASON REQUIREMENTS:

1. PERIMETER PROTECTION AND SEDIMENT CONTROL BMPS MUST BE UPGRADED IF NECESSARY TO PROVIDE SUFFICIENT PROTECTION FOR STORMS.
2. ADEQUATE EROSION PREVENTION BMPS MUST BE INSTALLED AND ESTABLISHED FOR ALL COMPLETED SLOPES PRIOR TO OCTOBER 1 AND MAINTAINED THROUGHOUT THE WET SEASON. IF A BMP FAILS, IT MUST BE REPAIRED, IMPROVED OR REPLACED WITH AN ACCEPTABLE ALTERNATE AS SOON AS IT IS SAFE TO DO SO.
3. THE AMOUNT OF EXPOSED SOIL ALLOWED AT ONE TIME SHALL NOT EXCEED STANDBY EROSION AND SEDIMENT CONTROL BMP CAPACITY.
4. AN INCOMPLETE DISTURBED AREA THAT IS NOT BEING ACTIVELY GRADED MUST BE FULLY PROTECTED FROM EROSION IF LEFT FOR 10 DAYS OR MORE.

DRY SEASON (MAY 1 THROUGH SEPTEMBER 30)

1. ALL EXPOSED DISTURBED AREAS MUST HAVE EROSION PREVENTION CONTROLS PROPERLY INSTALLED INCLUDING BUILDING PADS, UNFINISHED ROADS AND SLOPES. SLOPES LESS THAN 33.3% OR 1:3 (VERTICAL VS. HORIZONTAL) MAY USE PROPERLY DESIGNED AND INSTALLED DE-SILTING BASINS AT ALL DISCHARGE POINTS IN LIEU OF THIS REQUIREMENT.
2. ADEQUATE PERIMETER PROTECTION BMPS MUST BE INSTALLED AND MAINTAINED.
3. ADEQUATE SEDIMENT CONTROL BMPS MUST BE INSTALLED AND MAINTAINED.
4. ADEQUATE BMPS DESIGNED TO CONTROL OFF-SITE SEDIMENT TRACKING MUST BE INSTALLED AND MAINTAINED.
5. AT A MINIMUM, 125% OF THE MATERIALS NEEDED TO INSTALL STANDBY BMPS NECESSARY TO COMPLETELY PROTECT EXPOSED PORTIONS OF THE SITE FROM EROSION AND PREVENT SEDIMENT DISCHARGES MUST BE STORED ON THE SITE.
6. AN APPROVED "WEATHER TRIGGERED" RESPONSE PLAN IS MANDATED FOR IMPLEMENTATION IN THE EVENT THAT A PREDICTED STORM EVENT HAS A 50% CHANCE OF RAIN. THE PROPONENT MUST HAVE THE CAPACITY TO DEPLOY THE STANDBY BMPS WITHIN 48 HOURS OF THE PREDICTED STORM EVENT.
7. ALL SLOPES MUST BE EQUIPPED WITH EROSION PREVENTIONS BMPS AS SOON AS SLOPES ARE COMPLETED FOR ANY PORTION OF THE SITE.

TREE AND CULTURAL PROTECTION PLAN

L0.1

2/18/2022 8:36:11 AM

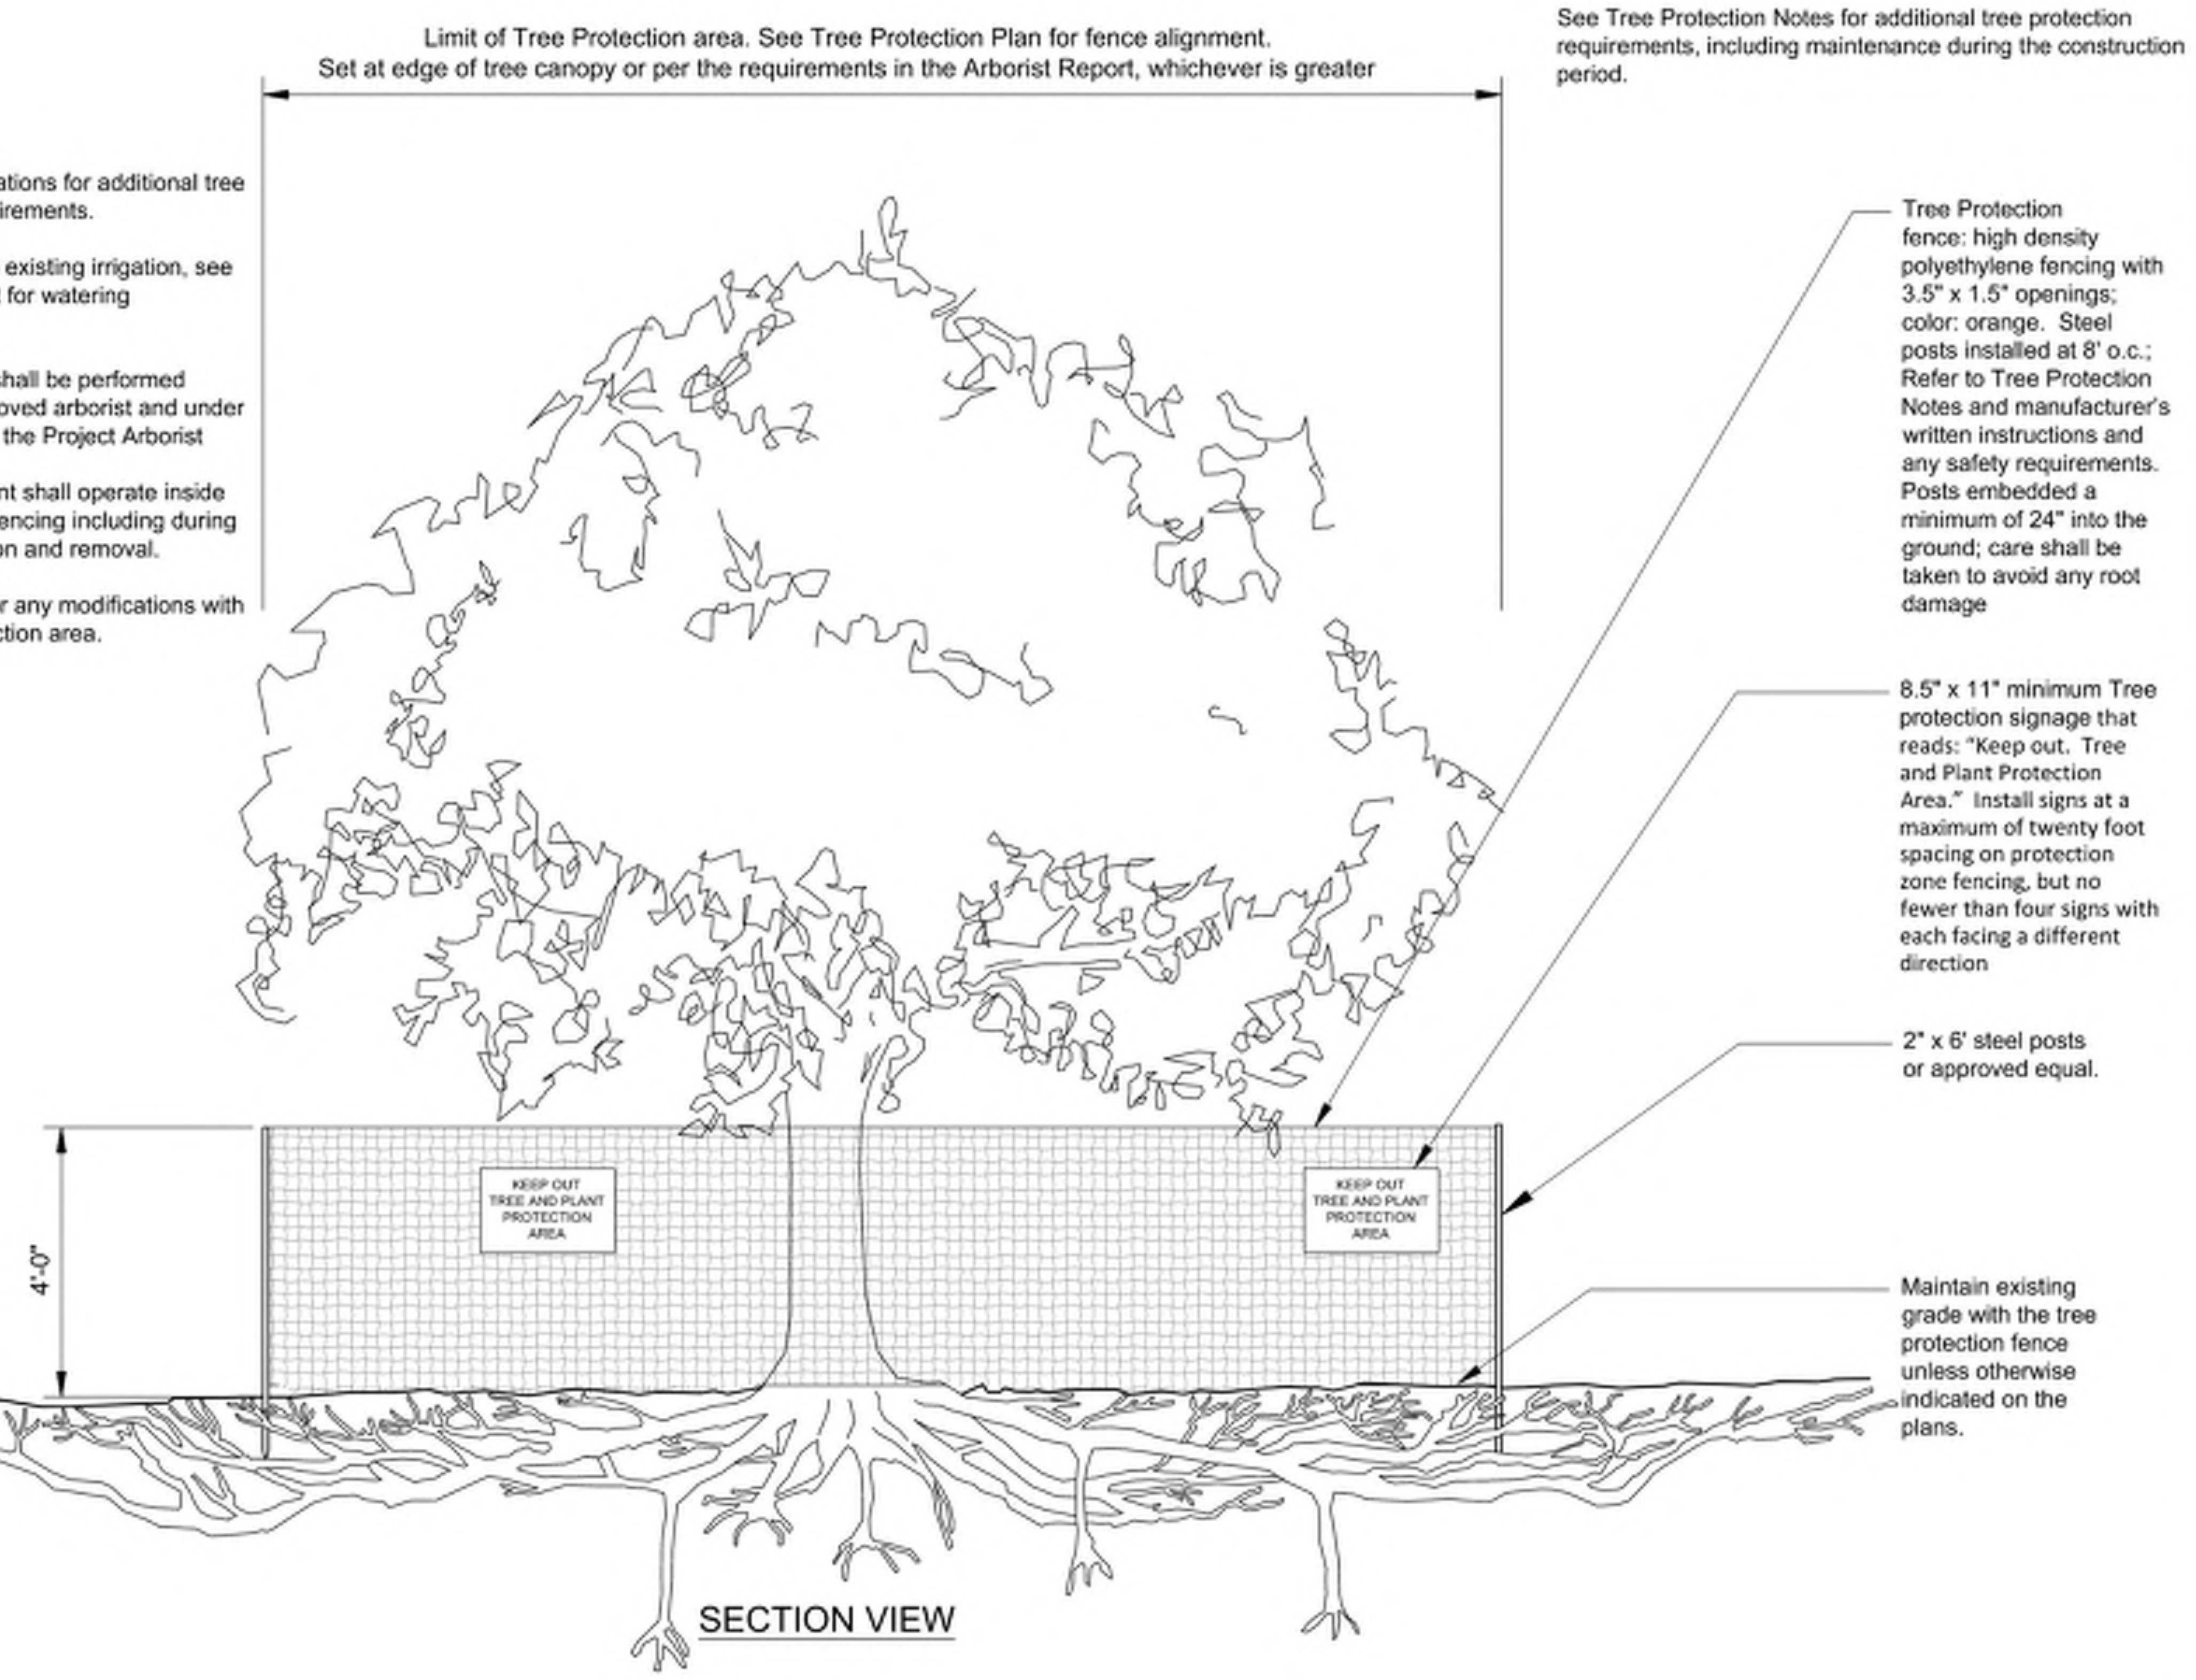
Notes:
1- See specifications for additional tree protection requirements.

2- If there is no existing irrigation, see Arborist Report for watering requirements.

3- No pruning shall be performed except by approved arborist and under the direction of the Project Arborist

4- No equipment shall operate inside the protective fencing including during fence installation and removal.

5- See plans for any modifications with the Tree Protection area.



1. TREE PROTECTION FENCE SCALE: 1/2"=1'-0"

TREE PROTECTION NOTES:

1. The Project Arborist is Laurel Everett, Jr., of Tree Life Consulting, LLC, (858) 967-2420. The Contractor shall be familiar with the requirements and recommendations in the Arborist Report: "Tree Protection Plan -- Mountain Empire Union School District," dated February 15, 2022.
2. A Tree Protection Zone (TPZ) is defined as the area surrounding trees to be protected during construction/renovation. Temporary fencing is erected to physically restrict access into the Tree Protection Zone. No activities should occur within a Tree Protection Zone without consulting with the Project Arborist and the Owner's Representative.
3. The requirements for the Tree Protection Zone shall also be used for the Cultural Protection Zone as a minimum. If any type of work, excavation, temporary storage, or temporary access is required for construction, the Contractor shall obtain in writing from the Owner's Representative. Any and all excavation or alteration within the Cultural Protection Zone shall require archaeological monitoring and observation by representatives of the local Kumeyaay tribe. Coordinate and plan all such activity with the Owner's Representative prior to commencement.
4. Tree Protection Zones are generally round with the tree being at the center. The radius of each Tree Protection Zone is determined by the trunk diameter at standard height (DSH). Because the species is not tolerant of root disturbance, the radius of the Tree Protection Zone is equal to six times the DSH or the extent of the canopy, whichever is greater. Refer to the Arborist Report for the Tree Protection Zone sizes for listed trees.
5. Once established, the Tree Protection Zone shall not be altered or disturbed for the duration of construction unless discussed with the Owner's Representative or designee and Project Arborist prior to any changes being made.
6. The Project Arborist shall review and approve the Contractor's Tree Protection Zone layout and installation and potential impacts on the Tree Protection Zone and report such findings to Owner's Representative or designee for review and approval.
7. The Contractor shall protect the Tree Protection Zone at all times from compaction of the soil, damage of any kind to trunks, bark, branches, leaves and roots of all plants; and contamination of the soil, bark or leaves with construction materials, debris, silt, fuels, oils, and any chemicals substance.
8. Any damage or injury to the tree shall be reported to the Owner's Representative and the Project Arborist as soon as possible. Injuries to roots or branches must be repaired immediately applying ISA Best Management Practices with consultation of the Project Arborist.
9. No equipment or debris of any kind shall be placed within the protective barriers of each Tree Protection Zone. No construction staging or disposal of construction material or byproducts including, but not limited to, paint, plaster, fuel, solvent, oil, asphalt, cement, grout, or any other construction material or chemical solutions is allowed in the Tree Protection Zone. Do not direct vehicle or equipment exhaust towards protection zones. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones.
10. The Contractor shall not engage in any construction activity within the Tree Protection Zones without the approval of the Owner's Representative and Project Arborist including: operating, moving or storing equipment; storing supplies or materials; locating temporary facilities including trailers or portable toilets and shall not permit employees to traverse the area to access adjacent areas of the project or use the area for lunch or any other work breaks.
11. In the event that construction activity is unavoidable within the Tree Protection Zone, notify the Owner's Representative and submit a detailed written plan of action developed with the Project Arborist for approval. The plan shall include: a statement detailing the reason for the activity including why other areas are not suited; a description of the proposed activity; the time period for the activity, and a list of remedial actions that will reduce the impact on the Tree Protection Zone from the activity.
12. Flag all trees and shrubs to be removed by wrapping orange plastic ribbon around the trunk and obtain the Owner's Representative's approval of all trees and shrubs to be removed prior to the start of tree and shrub removal. After approval, mark all trees and shrubs to be removed with orange paint in a band completely around the base of the tree or shrub 4.5 feet above the ground.
13. Flag all trees and shrubs to remain with white plastic ribbon tied completely around the trunk or each tree and on a prominent branch for each shrub. Obtain the Owner's Representative's approval of all trees and shrubs to be remain prior to the start of tree and shrub removal.
14. The Contractor shall schedule a pre-construction meeting with the Owner's Representative at least seven (7) days before beginning work to review any questions the contractor may have regarding the work, administrative procedures during construction and project work schedule for tree protection and removal of any on-site plant material, and to ensure everyone fully understands all tree protective measures. Prior to the pre-construction meeting, Contractor shall layout the limits of the Tree Protection Zone and then alignments of required tree and plant protection fencing and any root pruning. Obtain the Project Arborist and Owner's Representative's approval of the limits of the protection area and the alignment of all fencing and root pruning.
15. Protective Fencing
    - i. For existing trees to remain inside the construction site, protective fencing shall be installed at the Tree Protection Zone and approved in place by Owner's Representative or designee prior to the commencement of any construction or demolition. Install Tree Protection Zone signage in visibly prominent locations in a manner approved by job supervisor. Signs shall be no less than 8.5" x 11" and laminated to each protection zone that reads: "Keep Out -- Tree and Plant Protection Area" Install signs at a maximum of twenty foot spacing on protection zone fencing, but no fewer than four signs with each facing a different direction.
    - ii. The installation of tree protection fencing shall be in accordance with the Tree Protection Plan, and inspection by the Project Arborist and Owner's Representative or designee will be required prior to construction. Maintain protection zone fencing and signage in good condition as acceptable to the Arborist. Once construction is complete and equipment has been removed from the site, carefully remove tree protection fencing.
    - iv. If required to be moved, the tree protection fencing has to be moved under the direction of the Project Arborist. All tree protection zones need to be clear of debris and construction materials, and cleared of weeds regardless if fencing is present or not. A general rule is that the tree protection zone is to be at the dripline of the tree if fencing is not present. Tree protection fencing needs to be restored to its proper dimensions immediately following activity that resulted in the removal of tree protection fencing.
    - v. The tree protection fencing shall be:
        - A. Plastic Barrier Fence: Four feet in height. No access gates are needed.
        - B. Wooden or metal support posts shall be driven in the ground at least two feet in depth. Care should be taken to avoid any root damage
13. Supplemental Water
    - i. Provide supplemental water to the trees per the Arborist Report and under the direction of the Project Arborist. Coordinate with the Owner's Representative for the sources of supplemental water and any other scheduling or safety requirements due to school operations.
    - ii. Light, frequent irrigation applications shall be avoided. Water used shall be clean potable water from a reliable source.
    - iii. Install an adjustable, slow-emitting irrigation system around all trees. Inline drip hoses (e.g. Netafim) are the preferred emitter type, as they can be easily adjusted within the TPZ.
    - iv. Concentric rings of inline drip hoses are the preferred configuration. The number of rings depends on the size and age of a tree. The first ring should be a distance from the trunk that is three times trunk diameter. For example, the first ring for a tree with a two-foot diameter should be six feet from the trunk. The next ring should be two feet from the previous ring — and so forth. The final ring should be at the drip-line.
    - v. Only irrigate the oak trees with the guidance of the Project Arborist and approval of the Owner's Representative or designee. If the oak trees appear to be water stressed, contact the Owner's Representative or designee immediately. The area outside the Tree Protection Zone should be irrigated sufficiently with clean potable water to keep the tree in good health and vigor before, during, and after construction by the Contractor per consultation with the Project Arborist. Only irrigate oaks outside the Tree Protection Zone and with the guidance of the Project Arborist. Under no circumstance should the ground near the base of an oak be allowed to become moist during warm weather months.
14. The Tree Protection Zone shall not be subjected to flooding incidental to the construction work.
15. Work within the Tree Protection Zone
    - a. The Contractor shall exercise extreme caution when working within the dripline of existing trees. Trenching and root pruning is not allowed within the TPZ unless approved by the Owner's Representative or designee with the consultation of the Project Arborist. Where trenching is approved within a TPZ, only low-pressure pneumatic tools (e.g. air spade) shall be used to expose roots without causing significant damage. No other types of excavation tools shall be used unless approved by the Project Arborist and Owner's Representative or designee. Trenches in the Tree Protection Zone should be tunneled, or completed with an air spade to avoid damage to small feeder roots with the Tree Protection Zone. Verify all layout in field with the Owner's Representative or designee prior to the start of work within the dripline.
    - b. When using a low-pressure pneumatic tool, plywood sheets should be setup to contain the soil in an area near the trench. After backfilling, excess soil above original grade shall be removed from the Tree Protection Zone entirely.
    - c. Where structural footings are required and major roots (over 2" in diameter" will be impacted, the Engineer of Record shall submit acceptable footing design alternatives and / or location alternatives to the Owner's Representative or designee before proceeding with further plan review or construction.
    - d. Under no circumstance shall anything be placed within six feet of any oak tree's trunk.
16. Root Pruning
    - a. Any root cutting must be approved by the Project Arborist. Any root damage shall be documented and reported to the Owner's Representative and the Project Arborist as soon as practical.
    - b. Trenching and root pruning is prohibited within the Tree Protection Zone unless approved by the Project Arborist. Any root pruning within the Tree Protection Zone shall not be performed by untrained construction personnel, but shall be performed by qualified tree care professionals approved by the Project Arborist
    - c. Where roots greater than 2 inches in diameter are to be removed within the dripline of the tree, the Engineer of Record shall submit acceptable design alternatives to the Owner's Representative or designee for review.
    - d. Any required trenching shall be routed in such a manner as to minimize root damage. Radial trenching (radial to the tree trunk) is preferred as it is less harmful than tangential trenching. Construction activity shall be diverted from the Tree Protection Zone. Cutting of roots shall be avoided (i.e. place pipes and cables below uncut roots). Wherever possible and in accordance with applicable code requirements, the same trench should be used for multiple utilities.
    - e. In areas where the grade around the protected tree will be lowered, some root cutting may be unavoidable. Cuts should be clean and made at right angles to the roots. When practical, cut roots back to a branching lateral root. The Owner's Representative or designee needs to be present when root cutting is proposed and discussed. All root impacts shall be documented.
    - f. Where utility trenches are required outside protection zones, cut only smaller roots (less than one inch in diameter) that interfere with installation of utilities.
    - g. If larger roots (greater than an inch in diameter) are exposed, root pruning shall not be attempted by untrained construction personnel, but shall be performed by qualified tree care professionals or certified tree care workers approved by the Project Arborist.
    - h. Cutting roots larger than one inch shall be under the supervision of the Project Arborist. Roots shall be cleanly saw-cut; do not break, tear, chop, or slant the cuts. Roots must be cut clean to sound wood and flush with the trench side. Do not use a backhoe or other equipment that rips, tears, or pulls roots. A pneumatic air spade is the preferred tool for excavation within the Tree Protection Zone.
    - i. Once roots are cut, they should be covered with soil within 15-minutes. Backfill and add water to soak. Do not allow exposed roots to dry-out. If the trench cannot be backfilled immediately, provide temporary earth-cover or wrap with moist burlap. Water and maintain a moist condition. Backfill trench as soon as possible. After backfilling, excess soil above original grade shall be removed from the site.
17. "Natural" or pre-construction grade should be maintained in the Tree Protection Zone. At no time during or after construction should soil be in contact with the trunk of the tree above the basal flare.
18. When removing existing pavement in the Tree Protection Zone, avoid the use of heavy equipment, which will compact and damage the root system.
19. If the Owner's Representative or designee requires mulch in the Tree Protection Zone, the mulch materials and location should be shown on the plan.
20. If foot-traffic within the TPZ is required during the construction process, the route shall be covered by plywood sheets. No vehicle access is permitted unless approved by the Owner's Representative or designee with the advice of the Project Arborist. If vehicle access is required, the Contractor shall submit a plan developed under the guidance of the Project Arborist that is approved the Owner's Representative or designee. The plan shall show the limits of vehicle movement, haul routes, staging areas, contacts, and measures taken to minimize soil compaction, and duration of vehicular access.
21. Canopy Pruning:
    - a. If pruning is required to accomplish a specific objective, then adhere to the following pruning
    - b. guidelines: ISA (International Society of Arboriculture) Best Management Practices and ANSI A300 standards.
    - c. Tree pruning shall not be performed by untrained construction personnel, but shall be performed by a qualified tree care professional or a certified tree care worker. Any tree pruning must be approved in writing by the Project Arborist.
22. Damage to Trees - Reporting; Any damage or injury to trees shall be reported within six (6) hours to the Project Arborist and job superintendent or Owner's Representative so that mitigation can take place. All mechanical or chemical injury to branches, trunk or to roots over two (2) inches in diameter shall be reported in the monthly inspection report. In the event of injury, the following mitigation and damage control measures shall apply:
    - A. Bark or trunk wounding: Current bark tracing and treatment methods shall be performed by a qualified tree care specialist within two (2) days with the approval of the Project Arborist.
    - B. Scaffold branch or leaf canopy injury: Remove broken or torn branches back to an appropriate branch capable of resuming terminal growth within five (5) days. If leaves are heat scorched from equipment exhaust pipes, consult the Project Arborist within six (6) hours.
    - C. Any damage any tree's canopy will need to be restoratively pruned effective immediately after the damage occurs and no later than 48 hours after the damage occurs
23. The Project Arborist retained by the applicant shall conduct the following required monitoring and inspections of the construction site:
    - a. Inspections shall verify that the type of tree protection and/or plantings are consistent with the standards outlined within this Tree Protection Notes. For each required inspection or meeting, a written summary of the changing tree related conditions, actions taken, and condition of trees shall be provided to the contractor.
    - b. Pre-Construction Meeting. Prior to commencement of construction, the contractor shall conduct a pre-construction meeting to discuss tree protection with the job site superintendent, grading equipment operators, and the Project Arborist.
    - c. Installation and Verification of Tree Protection. The Project Arborist shall verify, in writing, that all pre-construction conditions have been met (tree fencing, erosion control, pruning, etc.
    - d. The Project Arborist shall be notified prior to any type of root or crown pruning.
    - e. The Project Arborist shall monitor any pruning operations
    - f. Prior to and during any required excavation within any Tree Protection Zone.
    - g. Contact the Project Arborist for final review once the construction has been completed.

3. Install root barriers in all instances where a tree trunk will be within 5' of adjacent paving, walls, curbs, any flatwork, or any other hardscape element. See Detail 7/L1.3 and specifications
4. Water use category is based on site location. Per WUCOLS IV Manual, 2014, assumed water usage is WUCOLS Zone 4, "South Inland Valley"

Planting Notes:

1. Verify locations of pertinent site improvements installed under other sections. If any part of this plan cannot be followed due to site conditions, contact landscape architect for instructions prior to commencing work.
2. Verify plant counts and square footages: quantities are provided as owner information only. If quantities on plant list differ from graphic indications, then graphics shall prevail.
3. Contact the local underground utility services for utility location and identification. Perform excavation in the vicinity of underground utilities with care and if necessary, by hand. The contractor bears full responsibility for this work and disruption or damage to utilities shall be repaired immediately at no expense to the owner. Verify all utility locations in the field prior to beginning work. Repair all damaged utilities to satisfaction of the owner and operating authority at no additional cost.
4. Trees to be planted a minimum of 3 feet from pavement except as approved by Landscape Architect.
5. Provide matching forms and sizes for plant materials within each species and size designated on the drawings. Prune newly planted trees only as directed by landscape architect.
6. Align and equally space in all directions trees and shrubs so designated per these notes and drawings.
7. Plant material to be installed and maintained by a qualified and experienced landscape installer.
8. All materials are subject to the approval of the Landscape Architect and Owner's Representative at any time. Landscape Architect to inspect all plant locations and plant bed conditions prior to installation. Stake all plant locations for review and approval by the landscape architect or owner's representative before planting. On-site adjustments may be required. Plants are to be freshly dug.
9. Transporting of plants shall be done in a manner as to not destroy the natural shape, compromise the health, or alter the characteristics of plant materials.
10. All plant beds shall receive 3" minimum of decorative gravel mulch (unless otherwise noted). Refer to Mulch Plans
11. Install all plant material in accordance with all local codes and ordinances. Coordinate with the owner to obtain any required permits necessary to complete work.

NOTE A:
POINT OF CONNECTION (POC) #1 SHALL BE A CONNECTION TO THE EXISTING 2" WATER SUPPLY LINE DOWNSTREAM OF WATER TANK AND PUMP. THE CONTRACTOR SHALL VERIFY THE ACTUAL LOCATION, WATER TYPE, METER SIZE AND WATER PRESSURE IN THE FIELD PRIOR TO STARTING WORK. MEASUREMENT OF THE STATIC (NO WATER MOVING) WATER PRESSURE IS ACCEPTABLE FOR POTABLE WATER SYSTEMS WHERE NO PUMP HAS BEEN INDICATED ON THESE PLANS. WHEN USING RECYCLED WATER, OR ON POTABLE WATER SYSTEMS REQUIRING A PUMP, ONLY THE MEASUREMENT OF DYNAMIC (WATER MOVING THROUGH THE METER) WATER PRESSURE, SHALL BE ACCEPTABLE. THE DYNAMIC WATER PRESSURE SHALL BE MEASURED AT THE MAXIMUM SYSTEM DEMAND AS INDICATED BELOW. IF ANY OF THE POC INFORMATION SHOWN ON THESE DRAWING IS FOUND TO BE DIFFERENT THAN THE ACTUAL POC INFORMATION GATHERED IN THE FIELD, IMMEDIATELY NOTIFY THE LANDSCAPE ARCHITECT AND IRRIGATION CONSULTANT. SHOULD THE CONTRACTOR FAIL TO VERIFY THE POC INFORMATION AS SHOWN HEREIN, ANY CHANGES REQUIRED BY LOW PRESSURE OR VOLUME SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

MINIMUM REQUIRED WATER PRESSURE AT POC: 57 PSI (DYNAMIC)
DESIGN WATER PRESSURE: 52 PSI
MAXIMUM SYSTEM DEMAND: 17 GPM
RESIDUAL WATER PRESSURE: 5 PSI

NOTE B:

WHEN A SLIGHT RELOCATION OF THE HEAD IS NOT SUFFICIENT TO CLEAR THE OBSTACLE, OR IF IT NEGATIVELY AFFECTS THE COVERAGE, AN ADDITIONAL HEAD SHALL BE INSTALLED TO PLACE ONE HEAD ON EITHER SIDE OF THE OBSTACLE. THE NOZZLES OF THESE TWO HEADS SHALL HAVE ARC PATTERNS THAT ADD UP TO THE ORIGINAL ARC PATTERN OF THE HEAD INDICATED ON THE PLANS. THE CONTRACTOR SHALL VERIFY ALL HEAD LAYOUT WITH OWNER'S AUTHORIZED REPRESENTATIVE PRIOR TO STARTING WORK.

THE SYMBOL FOR EACH PRODUCT SHALL BE A SCALED REPRESENTATION OF THE FOOTPRINT OF THE EQUIPMENT OR THE VALVE BOX IN WHICH THE EQUIPMENT IS INSTALLED. CONTRACTOR SHALL INSTALL ALL VALVE BOXES AND RELATED EQUIPMENT PER THE OWNER APPROVED SHOP DRAWINGS. ONCE THE SHOP DRAWING LOCATIONS ARE APPROVED, THE LANDSCAPE ARCHITECT OR OWNER'S AUTHORIZED REPRESENTATIVE WILL ALLOW NO ADJUSTMENTS TO THE APPROVED VALVE BOX PLACEMENT WITHOUT PRIOR WRITTEN ACCEPTANCE. ANY IRRIGATION EQUIPMENT INSTALLED WITHOUT PRIOR APPROVAL WITH SHOP DRAWINGS WILL BE SUBJECT TO RELOCATION BASED ON DIRECTION BY THE LANDSCAPE ARCHITECT AT THE CONTRACTOR'S EXPENSE.

Note: These schedules are intended only for compliance with local municipal codes and the water efficient landscape ordinance. These calculations represent the MAXIMUM REASONABLE run times and are used to ensure that all irrigation may be completed during the specific watering window allowed. These schedules do not include rainfall, site soil types, specific exposures (shade versus sun), actual irrigation days, or specific slope position. It is solely the responsibility of the irrigation contractor to program the controller as required to apply the correct amount of irrigation water for the landscape. All smart controllers shall be programmed using the specified ET or weather sensing equipment, satellite provided ET data, soil moisture sensors, and rain shut off devices as required. Contractor shall provide a controller schedule inside the controller cabinet prior to final turnover of the project to the owner.

1.05 Ceiling panels shall not support any luminaires, air terminals or devices.

1.06 For ceiling installations utilizing acoustical tile panels of mineral or glass fiber, it is not mandatory to provide ¾" clearance between the acoustical tile panels and the wall on the sides of the ceiling which are free to slip. For all other ceiling panel types, provide ¾" clearance between the ceiling panel and the wall on the sides of the ceiling free to slip. Clearance between ceiling grid runners/members and walls shall comply with the details on these drawings regardless of ceiling tile material.

2. MATERIALS

2.01 Ceiling wire shall be Class 1 zinc coated (galvanized) carbon steel conforming to ASTM A641. Wire shall be #12 gauge (0.106" diameter) with soft temper and minimum ultimate tensile strength = 70 ksi.

2.02 Galvanized sheet steel (including that used for metal stud and track compression struts/post) shall conform to ASTM A653, or other equivalent sheet steel listed in Section A3.1 of the North American Specification for the Design of Cold-Formed Steel Structural Members, (AISI S100). Material 43 mil (18 gauge) and lighter shall have minimum yield strength of 33 ksi. Material 54 mil (16 gauge) and heavier shall have a minimum yield strength of 50 ksi. ←

2.03 Electrical metallic tube (EMT) shall be ANSI C80.3/UL 797 carbon steel with G90 galvanizing. EMT shall have minimum yield strength (F_Y) of 30 ksi and minimum ultimate strength (F_U) of 48 ksi.

3. ATTACHMENT OF HANGER AND BRACING WIRES

3.01 Separate all ceiling hanger and bracing wires at least 6 inches from all unbraced ducts, pipes, conduit, etc.

3.02 Hanger and bracing wires shall not attach to or bend around obstructions including but not limited to piping, ductwork, conduit and equipment.

SUSPENDED LAY-IN PANEL CEILING: 2019 CBC

3.03 Hanger wires that are more than one (horizontal) in six (vertical) out of plumb shall have counter-sloping wires.

3.04 Slack safety wires shall be considered hanger wires for installation and testing requirements.

3.05 Hanger and bracing wire anchorage to the structure shall be installed in such a manner that the direction of the anchorage aligns closely with the direction of the wire (e.g., bracing wire ceiling clips must be bent as shown in the details and rotated as required to align closely with the direction of the wire, screw eyes in wood must be installed so they align closely with the direction of the wire, etc.).

4. FASTENERS AND WELDING

4.01 Sheet metal screws shall comply with ASTM C1513 and ASME B18.6.3. Penetration of screws through joined material shall not be less than three exposed threads.

4.02 Expansion anchors shall be: ***[RDP to indicate manufacturer, product, evaluation report number and test load for each size specified per CBC 1910A.5.4.]***

4.03 Power-Actuated Fasteners shall be: ***[RDP to indicate manufacturer, product, evaluation report number.]***

4.04 If not otherwise specified in the evaluation report, power-actuated fasteners installed in steel shall be installed so the entire pointed end of the fastener is driven through the steel member

4.05 Power-actuated fasteners in concrete or masonry are not permitted for bracing wires.

4.06 Concrete reinforcement and prestressing tendons shall be located by non-destructive means prior to installing post-installed anchors.

4.07 Welding shall be in accordance with AWS D1.3 using E60XX series electrodes.

5. TESTING

5.01 All field testing must be performed in the presence of the project inspector.

5.02 Post-installed anchors in concrete used to support hanger wires shall be tested at a frequency of 10 percent. Power-actuated fasteners in concrete shall be field tested for 200 pounds in tension. All other post-installed anchors in concrete shall be tested in accordance with CBC Section 1910A.5.

5.03 Post-installed anchors in concrete used to attach bracing wires shall be tested at a frequency of 50 percent in accordance with CBC Section 1910A5.

6. LUMINAIRES

6.01 All luminaires shall be positively attached to the ceiling suspension systems by mechanical means to resist a horizontal force equal to the weight of the luminaire. A minimum of two screws or approved fasteners are required at each luminaire, per ASTM E580 Section 5.3.1.

6.02 Surface-mounted luminaires shall be attached to the main runner with at least two positive clamping devices. The clamping device shall completely surround the supporting

D. EXCEPTIONAL CONDITIONS

The building does not include service water heating. Verify that service water heating is not required and is not included in the design.

The user model includes space(s) that are designed to be served by mechanical cooling systems, but the cooling systems were not included in the simulation model. A cooling system has been modeled for both the proposed and standard cases.

The user model includes space(s) without sufficient cooling equipment. Cooling equipment has been added to the model to meet cooling loads.

D. EXCEPTIONAL CONDITIONS

This project includes partial performance compliance scope options. The building must show compliance with all other applicable compliance scope options (performance or prescriptively) before occupying.

The building does not include service water heating. Verify that service water heating is not required and is not included in the design.

The proposed building includes HVAC components that do not meet the mandatory efficiency requirements.

This project uses the Simplified Geometry Performance Modeling Approach which is not capable of modeling daylighting controls and assumes the prescriptive Secondary Daylit Control requirements are met. PRESCRIPTIVE COMPLIANCE documentation (form NRCC-LTI-02-E) for the requirements of section 140.6(d) Automatic Daylighting Controls in Secondary Daylit Zones is required.

The user model includes space(s) that are designed to be served by mechanical cooling systems, but the cooling systems were not included in the simulation model. A cooling system has been modeled for both the proposed and standard cases.

The user model includes space(s) without sufficient cooling equipment. Cooling equipment has been added to the model to meet cooling loads.
